

FLAME RETARDANT V-O PLASTIC STATEMENT

Although there are no specific requirements for batteries to be constructed in flame retardant case material, the applications in which some batteries are used are such that it is desirable to have all of the plastic components (including the battery) in flame retardant plastic.

Power-Sonic offer a range of battery products manufactured in UL94V-O rated flame retardant ABS plastic that meets the requirements of EN60950. The range is marked with a V-O symbol on the carton and battery case which indicates the highest level of flame retardancy.

If additional confirmation of the flame retardant properties of the batteries is required beyond the symbol on the battery case, please contact us.
